

# Erso and Bodhi Code Cylinder Base

100% Scale

This is based on three photos, one with the cylinder in Jyn Ves pocket, one on her bandolier, and one on Bodhi's bandolier. From the three photos the top half of the cylinder seem well defined. The bottom half opposite the clip is unknown. The pocket clip is a "deep carry" (clip bends up before going down) version which appear to be attached with with screws. The tab washer is used when vibration might allow nuts to loosen from their bolts. The "pointed ear" version is popular in aviation.

Colors identify surface of equal diameter for those either using "subtractive" fabrication to reduce a larger cylinder, (such as lathe turning) or to add layers using "additive" fabrication such as craft foam wrapping.

"Unrolled" Cylinder Surface
