\*All Dimensions in millimeter\*

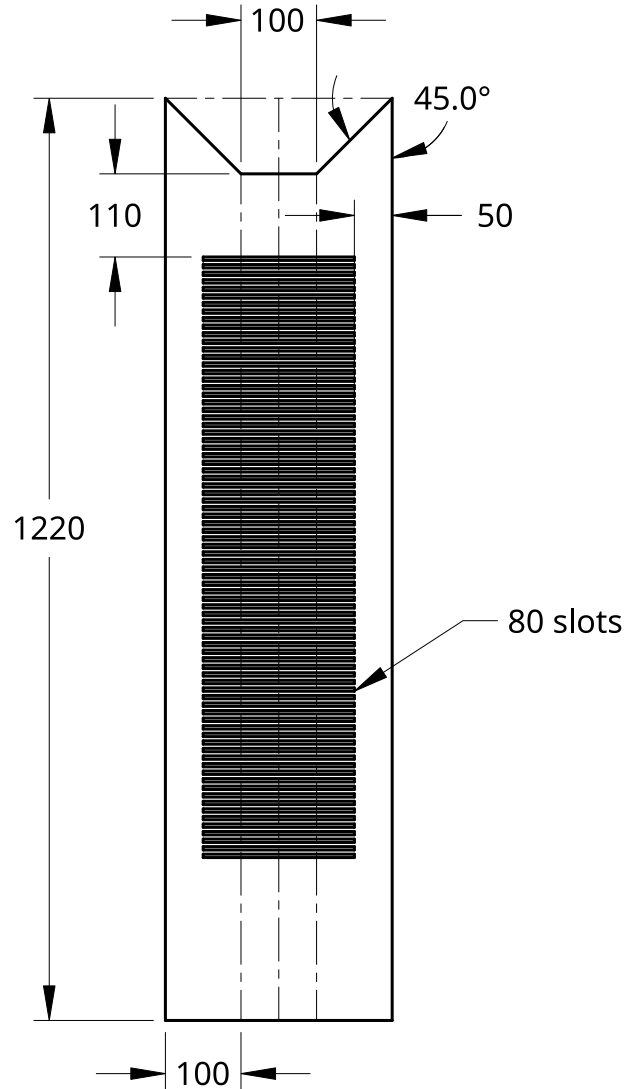

Slot Geometry: Slot is 4.5  
mm, distance between  
each is 5.5 (A)  
SCALE 1:3

Lamps are mostly identical; the height and number of slots change. Distance from top slot to top front of lamp, angle of top, slot size, and lengths of sides are the same. Construction lines show center of piece and bend locations.

Note that this isn't an exact replica of Curtis Jere's work, but a model to replicate within my own means. Exact slot geometry could not be obtained, this is my best guess using only reference photos. Also this includes only the front detail, the back panel and lighting choice is more circumstantial to the desired end product.

SCALE 1:10
