

Braindance Wreath Accessory Files

These PDFs are the raw files that I used in my laser cutter (Muse Core + Retina Engrave 3). You may be able to use them even if you don't have access to a laser cutter.

Given all the variables, I can't be sure they will scale properly for your application and materials.

The stand parts are also available as STLs for 3D printing, with greatly simplified text.

Display Stand

These files were designed for ¼" clear acrylic, but you could print them out and cut them by hand from 6mm sintra or wood (if you can get your hands on real wood!).

Foam Padding

The foam pads were laser cut from ¼" EVA foam. Again, you could print the files out and cut them by hand. They can be adhered to the wreath with CA glue.
