How to build:

Simply remove all white sections.
Then glue it all together starting with Number 4. This is so you can add the name later, and cut the name section out once you build the badge. You will need to print the name 4 times and stick these together, as individual letters not in a rectangle. Then once happy with the 2 sections you are left with, these can be glued onto numbers 2 and 3.

Number 1 will become the baseplate.

Once the badge is built cut out Number 1 and add a card edge to it.

Cut out a long piece of card making sure its no higher than the badge itself (thicker card would be good for this step).

Then simply glue it around the edge!

The name can be cut out and added at a later stage if needed so, RED is for the "Dredd Angle" and Blue is for the longer names like "Anderson". The final page includes both of these names and some Alphabet letters so you can make your own. Our website also has a name generator, but this is only for the DREDD angle.

Have fun!!
