

## SYLVIE HORNS FOAM TEMPLATE - WALKTHROUGH

1. Cut out templates, and trace onto 2mm foam. Remember to trace two for the Right horns and horn wraps.
2. Before tracing out the crown, check that you are happy with the length that it wraps around your head, adding extensions to the ends if need be. Cut the crown out of the foam, and lightly score the arrows on the sides. A little goes a long way, and with 2mm foam you don't want to cut too deep. The cuts will open more once heated. Heat the piece to be rounded to the shape of your head.
3. Cut and glue the bottom and the middle crest together, lining up the bottom tips.

**Bevelled cut on underside of top Crest**

**Glue and pinch bevel**

**Result on top**

4. For the top crest, bevel the back so it pinches up in the middle, and glue the bevel together. I rounded the edges of the top crest by sanding lightly. Glue the top crest to the other piece by lining up the top corners. Glue the crest to the crown!
5. When cutting out the horns, remember to bevel the edges, so when stuck together it gives it a slight point on both sides. For the horns, I made a full left and a right, and then cut down the one I was less happy with for the broken horn. Heat the pieces and form their round shape and the upwards curve, to create the rounded horn shape (as seen in photo). Glue sides together, and then lightly heat if the horn needs bending more. Stick the most successful horn on the left of the crown, and cut down the other to create the broken horn. I cut smaller sections of the leftover horn tip to create the 'rings' inside the broken horn.

**Horn shapes after heating**

**Horns after glueing**

**Broken Horn with rings and Quickseal texture**

6. Glue the horn wraps to the base of the horns, creating and matching the points on the horns
7. Use Quickseal to fix and holes, and Modge Podge (or other sealant) to seal, then paint!
8. For wearing, you can attach elastic to the ends, or attach magnets that can stick to hair clips
